

RUSHIKESH GANORKAR

Frontend Engineer · React & TypeScript · Healthcare SaaS

Email: rdganorkars3@gmail.com | Phone: +91 8793671464 | Location: Pune, India | GitHub: github.com/rishi041 |
LinkedIn: [rushikesh-ganorkar-rd](https://www.linkedin.com/in/rushikesh-ganorkar-rd) | Web: [Portfolio](#)

Summary

Frontend Engineer with **3+ years** of experience architecting and delivering scalable **React** and **TypeScript** applications in production healthcare SaaS environments. Specialises in performance optimisation, component-driven architecture, real-time systems, and AI-augmented development workflows. Reduced API network load by **40%** through strategic React Query caching, converted a React Native patient application to a fully responsive React web platform in under **3 weeks**, and contributed to a live product actively used by **5,000+ patients and healthcare providers** across the US.

Technical Skills

Core:	ReactJS, TypeScript, JavaScript (ES2022+), HTML5, CSS3, JSX
State Management:	Redux Toolkit, React Query (TanStack), Context API
Styling:	Material UI (MUI), Chakra UI, SASS/SCSS, CSS Modules, Responsive Design
APIs & SDKs:	REST APIs, Twilio Conversations SDK, Third-party SDK Integrations
i18n & Forms:	react-i18next, Multi-language Support, React Hook Form
Testing:	Jest, Enzyme, Unit Testing, Component Testing
Tools & Build:	Git, Vite, Webpack, Jira, Agile/Scrum
AI Dev Tools:	Claude AI (VS Code), Cursor AI — ~25% faster feature delivery

Work Experience

Thinkitive Technologies Pvt Ltd

Frontend Engineer

Pune, India
Nov 2024 – Present

- Architected and owned end-to-end frontend development for **Unity Health** — a live production healthcare SaaS platform with **5,000+ active users** across Android, iOS, and web — supporting US provider workflows across RPM, RTM, CCM, and PCM programmes.
- Led the conversion of a React Native patient mobile app into a fully responsive React web platform (desktop, tablet, mobile) in **under 3 weeks**, achieving full feature parity and zero production regression on launch.
- Implemented multi-language support using **react-i18next**, enabling locale-based content delivery for multilingual patient populations and improving platform accessibility across regions.
- Designed and shipped a new provider-side Dashboard UI from concept to production in **1 week**, applying component reusability and lazy loading for non-critical sections — improving initial render performance.
- Engineered **15+ complex multi-step dynamic forms** using React Hook Form and Material UI with real-time field validation, reducing provider manual data entry time by **30%** and decreasing form error rates.
- Optimised API performance via **React Query caching** with fine-grained cache invalidation, reducing redundant network requests by **40%** and improving perceived page load speed across high-traffic sessions.
- Integrated **Twilio Conversations SDK** to deliver real-time provider-patient and group messaging; architected reusable channel management patterns across 3 product modules.
- Delivered IT Support Ticketing and **Principal Care Management (PCM)** modules to production, expanding platform workflow coverage for providers.
- Led reusable component library development, enforcing design system consistency and eliminating duplicate UI logic across the full platform.
- Accelerated feature delivery by **~25%** by integrating Claude AI (VS Code) and Cursor AI for scaffolding, refactoring, and bug diagnosis without compromising code quality or review standards.

HeapTrace Technology Pvt Ltd

Frontend Developer

Pune, India
Mar 2024 – Oct 2024

- Independently managed full client engagement lifecycle — requirements analysis, technical scoping, architecture design, development, and production handover — across multiple concurrent projects with full autonomy.
- Delivered multiple **Proof-of-Concept builds** that were directly promoted to production, reducing time-to-approval for client stakeholders.
- Architected and built complex, data-intensive dashboards with multi-dimensional filtering, dynamic sorting, and real-time data visualisation logic — enabling business teams to derive insights independently.
- Optimised React rendering performance by implementing **memoisation** (React.memo, useMemo, useCallback) and restructuring state management patterns, resolving UI bottlenecks under high data volumes.
- Translated ambiguous client requirements into scalable component architectures, establishing clear API contracts that improved cross-team alignment and accelerated backend integration.

Trinesis Technology Pvt Ltd

Software Developer

Nagpur, India
Dec 2022 – Mar 2024

- Developed scalable enterprise web applications using React and JavaScript for **government records management** and logistics domains, serving thousands of end users in production.
- Built a reusable UI component library adopted across **3+ internal projects**, standardising design patterns and enforcing visual consistency across the codebase.
- Integrated RESTful APIs using a clean **service-layer architecture**, separating data-fetching logic from UI components and reducing onboarding time for new team members.
- Authored **Jest and Enzyme** unit tests for critical UI paths, increasing test coverage and reducing post-release regression defects across sprint cycles.

Key Projects

Patient 360 — React Native to Web Platform | *ReactJS, TypeScript, MUI, react-i18next, React Hook Form, REST APIs* Live in Production · Thinkitive Technologies

- **Problem:** The existing patient platform was mobile-only (React Native), leaving patients without web access on desktop or laptop devices.
- **Role:** Led solo frontend conversion — redesigned the UI for web viewports, built fully responsive layouts (desktop, tablet, mobile), integrated react-i18next for multi-language support, and added dynamic forms for patient data capture.
- **Result:** Delivered to production **in under 3 weeks** with zero feature regression; extended platform reach to web users across all devices for **5,000+ active patients**.

Unity Health — Provider Dashboard & Care Modules | *ReactJS, TypeScript, MUI, React Query, Twilio SDK, Redux Toolkit* Live in Production · Thinkitive Technologies

- **Problem:** Providers lacked a centralised view of patient data and care workflows; IT support and PCM programmes had no dedicated frontend interfaces.
- **Role:** Designed and implemented the Dashboard UI from scratch; built IT Support Ticketing and PCM modules; optimised API calls via React Query caching.
- **Result:** Dashboard shipped **in 1 week**; React Query caching reduced network requests by **40%**; platform supports **5,000+ concurrent users** across care workflows.

DRIMS & SMC — E-Government Records Lifecycle Platform | *React, Redux, Kendo-React, JavaScript, SASS, CSS Modules, Jest, Enzyme* Trinesis Technology

- **Problem:** Government agencies needed a scalable system to manage complex document lifecycle workflows with full audit compliance across millions of records.
- **Role:** Developed the React + Redux frontend architecture, implemented Kendo-React data grids for high-volume record navigation, and built reusable modular UI components.
- **Result:** Delivered a production system handling **millions of records**; modular architecture reduced duplication and improved maintainability across the codebase.

Shipping & Logistics Fleet Dashboard | *React, TypeScript, Highcharts.js (Gantt), Chakra UI, SASS, Vanilla JS* HeapTrace Technology

- **Problem:** Fleet operations teams lacked a real-time visual tool for tracking and scheduling **500+ concurrent shipments** efficiently.
- **Role:** Built interactive Gantt chart scheduling and live fleet tracking dashboards; optimised heavy data rendering using memoisation and virtualisation techniques.
- **Result:** Delivered smooth, responsive chart interactions under production-scale data volumes; improved dispatcher scheduling efficiency significantly.

Education

Master of Computer Applications (MCA)
Shri Ramdeobaba College of Engineering and Management, Nagpur

Apr 2020 – Aug 2022
CGPA: 7.79 / 10

Certifications

Namaste React — NamasteDev.com

Professional JavaScript 2023 (Beginner to Advanced) — Udemy

Front End Development Libraries — freeCodeCamp

Professional CSS (Flexbox, Grid, Animations) — Udemy
